BankID 2009

TOPICS

- ✓ **What is BankID?**
- ✓ **Why do banks issue eID (BankID)?**
- ✓ **How are operations organised?**
- ✓ **Where are we today?**
- ✓ **BankID and central public administration**
- ✓ **BankID on mobile**

Characteristics

Banking industry

- ✓ **150 banks**
- ✓ **Large number of small savings banks**
- ✓ **Biggest banks – DnB NOR Bank, Nordea Bank, Fokus Bank (Danske Bank), Handelsbanken, SR-Bank**
- ✓ **Long tradition of close cooperation on operational infrastructure (multilateral approach)**

Electronic infrastructure in society

- ✓ **“Everybody” has access to Internet**
- ✓ **“Everybody” makes use of Internet banking**
- ✓ **Everybody has mobile phones**

What is BankID?

BankID

**BankID is the banks' eID for
secure authentication and signature
in open networks**

It has two functions:

Authentication

You can be certain that you
are communicating with the
right person (entity)

Signature

I am me – so I can sign

BankID

Electronic authentication

Why do banks issue BankID?

- ✓ Banks have issued ID cards to customers since 1975

"Bankkort" is considered reliable and is the most widespread used ID card in Norway

- ✓ Banks already know who their customers are

Why do banks issue BankID?

- ✓ Banks need secure communication on Internet for distribution of their own services to customers
- ✓ Through use of BankID as "log on" to Internet banking and other financial services customers will be (are) familiar with the use of eID

Creates necessary conditions (critical mass) for offering secure electronic services to other sectors (business as well as public administration)

Why do banks issue BankID?

- ✓ **Interoperable payment services on the Internet requires interoperable electronic ID services**

[Link the electronic ID system to the payment system](#)

Domestic
card scheme

BankID signature

The screenshot shows a web-based payment interface. At the top, it says "BankAxess Brukerstedsnavn AS" and "BankID". Below that, there's a table with payment details: Beløp: 4290,87 NOK, Bestillingsdato: 25.05.2004, Betalingsdato: 20.05.2004, Referanse: 543294135. There are dropdown menus and input fields for "Sikkerhetskode:" and "Personlig passord:". At the bottom are buttons for "Bekreft betaling" and "Avbryt".

Domestic payment
service for purchase
over the internet

BankID 2009

How are operations organised?

- ✓ **The BankID scheme was initiated by the banking industry through the two banking associations – 2000**

- ✓ **Each individual bank are themselves issuers (approx. 130 of 150 banks participate in BankID)**

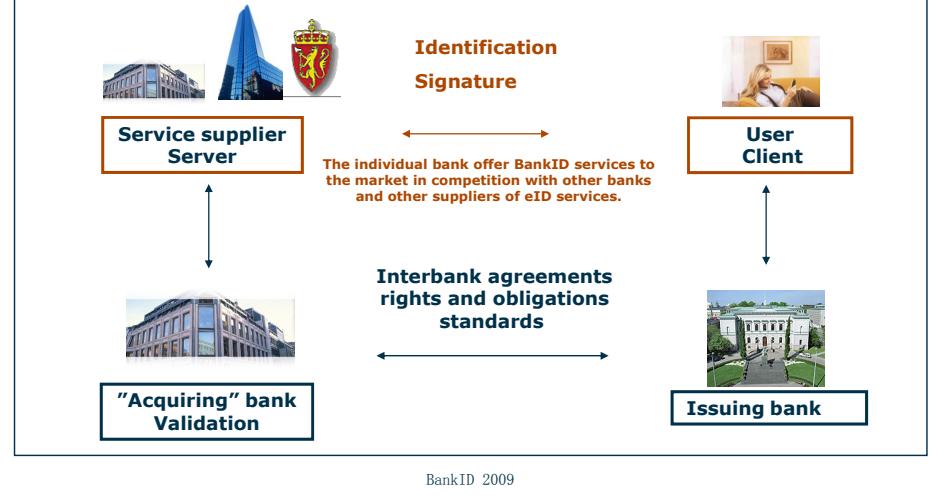

- ✓ **One technical sub-supplier
(joint technical infrastructure)**

18 May 2009

BankID 2009

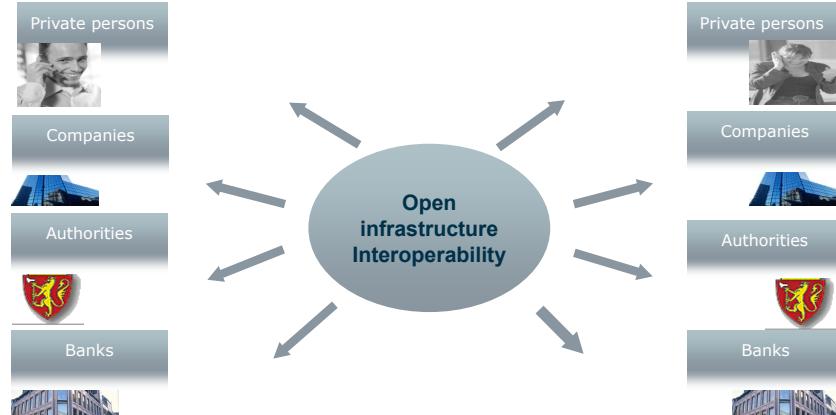

How are operations organised?

BankID is based on the "four corner model"

BankID 2009

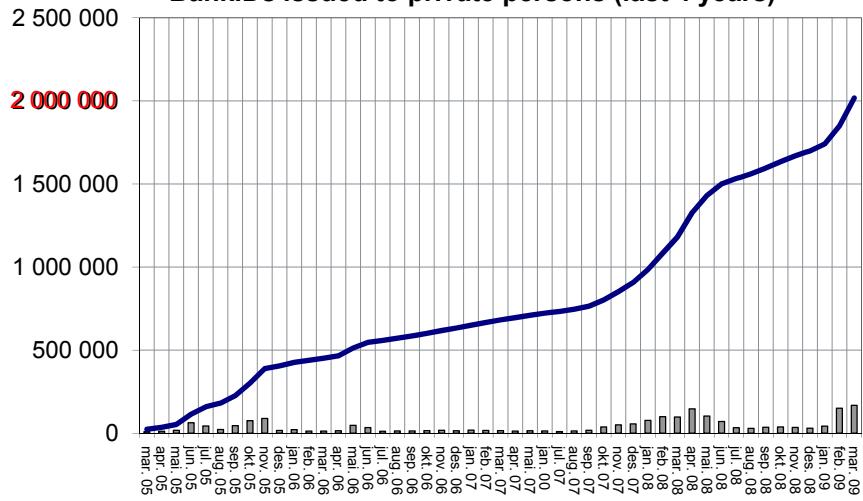

BankID is offered to all market segments

BankID 2009

Where are we today?

BankIDs issued to private persons (last 4 years)

BankID 2009

Where are we today?

Many different services and merchants offer secure communication with BankID

- ▶ [Tenders](#)
- ▶ [BankAxess](#)
- ▶ [Car dealers](#)
- ▶ [Book clubs](#)
- ▶ [Bidding rounds – real estate](#)
- ▶ [Securities trading](#)
- ▶ [Insurance](#)
- ▶ [Internet banking \(private customers and companies\)](#)
- ▶ [Internet shopping](#)
- ▶ [Public administration \(municipals\)](#)
- ▶ [Pension rights](#)
- ▶ [Mail service](#)
- ▶ [Travel industry](#)
- ▶ [Student welfare associations](#)

**In total:
600 – 800 000**
BankID transactions
each day

BankID 2009

BankID and national public administration

- ✓ **BankID fulfils the highest level of security requirements demanded by Norwegian authorities**
- ✓ **BankID is registered as a qualified electronic certificate with the Norwegian Post and Telecommunications Authority**
- ✓ **There are differences in the approach to choice of “business model”. The “four corner model” not necessarily preferred by the authorities.**

BankID 2009

BankID and national public administration

- ✓ **April 2008: Minister of Government Administration and reform announces the introduction of a public eID in 2009/2010.**
- ✓ **The public eID is an alternative to private eID solutions, also for use in relation to central public administration. We favour this approach!**
- ✓ **The authorities are to set up a “security hub” as a layer between the suppliers of eID and the different entities within public administration. Do we favour this approach?**

BankID on mobile

- Telecom entering the payments business or banks entering the telecom business?
- In 2006 the banking industry and the two mobile network operators in Norway concluded a framework agreement
 - Banks do what they do best:
 - * Payments and "customer identification"
 - Telecom do what they do best:
 - * Communication services and access to services
- Link the telecom infrastructure to the banks BankID infrastructure
- Service launched March 2009

BankID 2009

BankID on mobil offers:

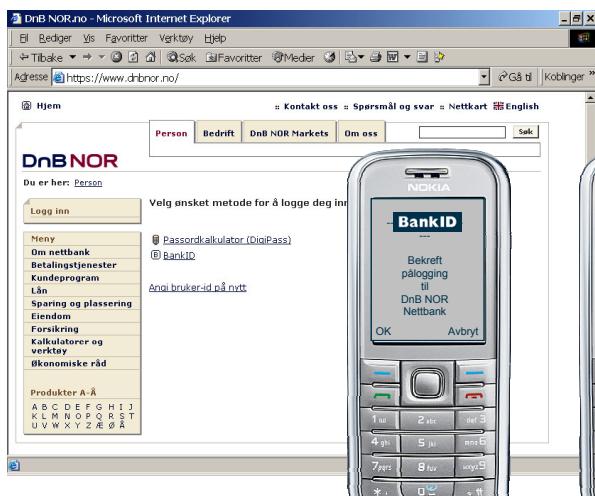

- Alternative to code generator (OTP) or code card
- Distribution of BankID services (also) through the mobile channel
- Secure interoperable mobile bank account related payment service - BankAxess
